**Key**

*#* — Task number — an arbitrary number assigned for tracking purposes.

*Task* — a short description of the task.

*Prio* — relative priority of task in the range 1 to 5: 1=immediately vital, 2=essential but not immediately so, 3=important, 4=will have to wait for more important items first, 5=desirable someday if we have the time.

*Status* — current status of task.

*Eff* — which portions of the system this task effects: p=Commodore 64 program disk, i=Commodore 64 image disk, h=host system, d=design or documentation, w=world database, u=Stratus or Unix based utilities.

*Who* — who is responsible for performing this task: c=Chip Morningstar, r=Randy Farmer, a=Aric Wilmunder, j=Janet Hunter, g=Gary Winnick, n=Noah Falstein. Names are listed in order of importance to task. Names after a space are secondary personnel for task.

*Time* — how much time this task should take to complete, once started.

*Updat* — date that this task's entry in this list was last updated.

*Target* — target date for completion of this task.
