Late last month, but I am a special
case. I am currently borrowing a C64
since my 128 is broken, and the fire
button on Port 1 on this 64 is not
working due to the CIA chip in the
64. So when I enter Habitat, I can't
do anything but send ESP's...I can't
even read HabMail.
Assuming that were fixed, it would have
been within the past 2-3 days at least.
