

Statistics we might want to collect to snoop on people and get an idea of where the load is and what people are doing lots of or little of etc:

Regions:

- occupancy vs. time (occupancy in terms of avatars OR objects in general)
- maximum occupancy
- fraction of population visited
- transaction rate vs. time
- maximum transaction rate
- fraction of time active

Avatars:

- hours logged in
- transaction rate vs. time
- maximum transaction rate
- minimum time between transactions
- maximum time between transactions
- transaction type vs. transaction number
- regions visited
- number of different regions visited
- number of region transitions
- region transition rate

Classes:

- number of instances

Objects:

- time active vs. time dormant
- number of transactions
